

## THE VALUE OF KNOWLEDGE

40 years of research and innovation in the food technology sector make Roboqbo the company with the most extensive know-how in the world in the processing of raw materials.

Obo is an extremely innovative and highly technological work system for food processing able to carry out any type of preparation in very short time and in a single manufacturing process. The relentless pursuit of quality is what we pursue every day. With a staff of Consultants and Professionals, Pastry Chefs, Chefs and Food Technologists, every day we study and develop new recipes and gastronomic specialities from different parts of the world. The Roboqbo system combines the cultures and food traditions of the 5 continents, in a gastronomic journey that becomes knowledge.

We develop the recipes alongside our customers so that they can exploit the full potential of the machine.

We are a company geared to disseminating the excellence of gastronomic culture.

# Qbo 4.0 design & technology

Roboqbo is creativity, passion, pursuit of excellence and continuous innovation!

## CONSTANT AND GUARANTEED QUALITY

The **Qbo** system is synonymous with quality: of product, work and life.

The unique technology of **Qbo** and the constant search for excellence guarantee an extraordinary result through the simplification of the process.

## **VACUUM COOKING**

**Qbo** protects the organoleptic values and natural colours of the raw materials. The aromas and flavours are enhanced restoring an original and unique taste

## **STANDARDIZATION**

The result of the **Qbo** system is given by the constant control of the process in all its phases. The entire process is managed and monitored by the PLC, PC and software developed ad hoc which also stores the recipes.

This guarantees to maintain high and constant quality standards.

#### **SPEED**

Extremely reduced cooking and/or cooling times preserve the tastiness and the original fragrances of the raw materials, restoring high production capacity. **Qbo** is the fastest existing system for "batch" processes.

## **A SINGLE PROCESS**

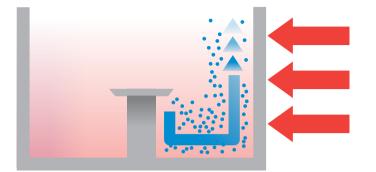

The advantage of being able to put all the ingredients in the tank reducing the different processing steps into a single uninterrupted cycle.

## **TECHNOLOGY BASED ON QUALITY**

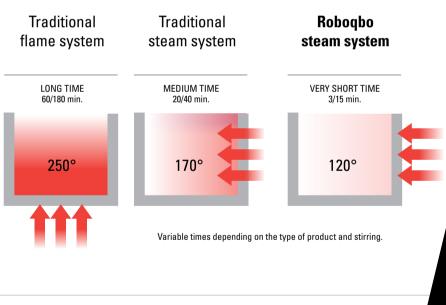

## Particle heating

Particle heating is typical of **Qbo**. This system ensures heating every single particle with direct contact of the radiating surface. In this way, no particle acts as thermal conductor with the risk of overexposing to heat.

## Low temperature

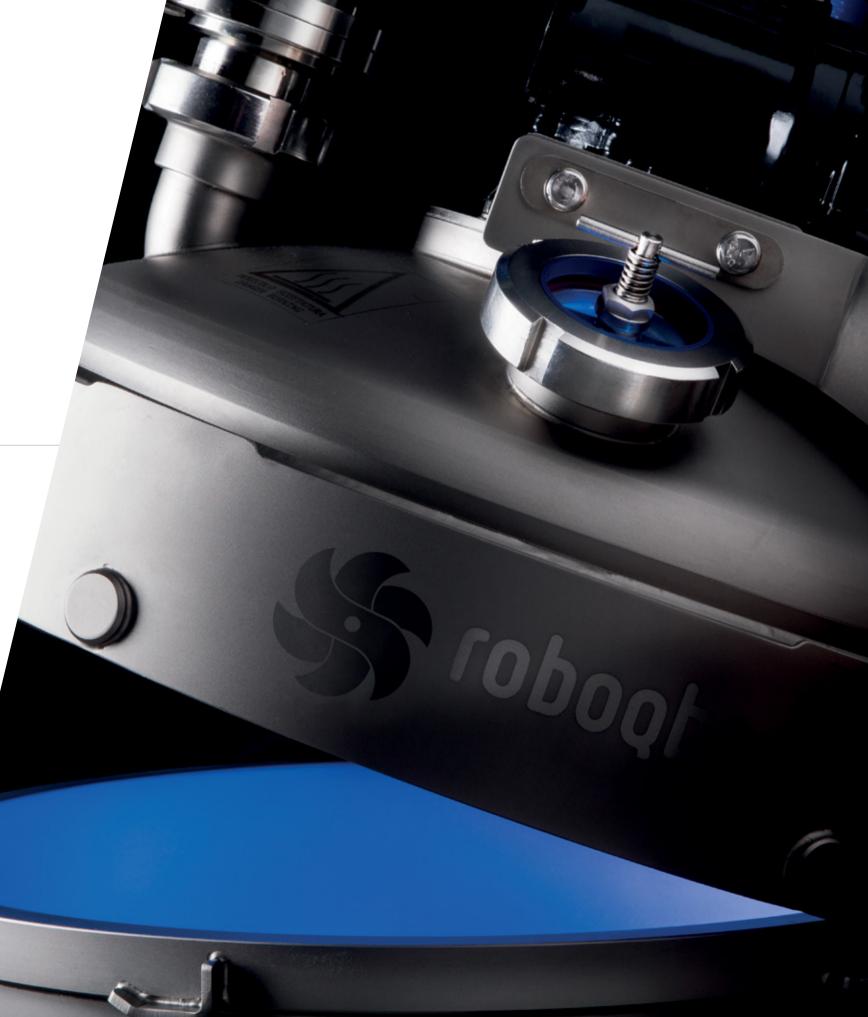

Particle heating allows to obtain a very high quality product with a low thermal impact that preserves the nutritional properties of the raw materials. High precision temperature control, + 0.3°C.

## Oxidative protection

The vacuum device allows to extract the air before and during the processes eliminating the oxidative effect. It's direct consequence is that the raw materials preserve their colours, aromas and flavours.

# The Qbo 4.0 planet

## **DESIGN ERGONOMICS SOFTWARE FOOD SAFETY**

Simple and intuitive interface for immediate control of the process.

Windows **0S**, for the management of application systems.

**Advanced control** through PC-PLC connection.

HMI System, man-machine automatic user interface for management, monitoring and remote control.

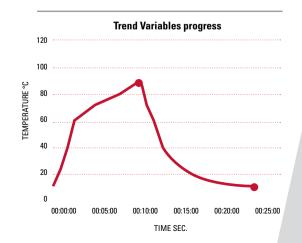

Voice system, Qbo communicates each phase of the process to the operator by voice.

**4.0** data exchange between machine and office. Files download and process diagrams.

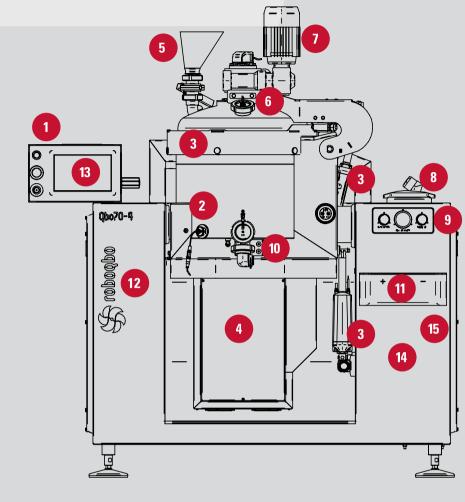

**CIP** An advanced fully integrated washing, hygiene and sanitizing system for the protection of food safety and the elimination of bacterial loads.

**Self-diagnosis system** automatic detection of power supply and operation anomalies; scheduled maintenance notification through audio and video alarms.

**Integrated Wifi Ready** system

- **1** Qbo 4.0 **interface** for the company's **6** Inspection glass and interior light. digital transformation.
- 2 Temperature probe.
- **3** Automatic movements of lid. tank and safety lock.
- 4 Main tool drive motor.
- **5** Hopper to introduce ingredients during the process.

- 7 Motorised spatula for tank and lid scraping.
- 8 Vacuum filter.
- **9** Visual inspection of power supplies.
- **10** Pneumatic valve for product extraction.
- 11 CIP, integrated self washing and sanitizing system.

- 12 PC, PLC, Ethernet, WiFi.
- **13** TEAM VIEWER remote maintenance, safety control, connectivity, application systems management and process control.
- 14 Internal steam generator.
- **15** Boiler pressure control.

#### FOOD TECHNOLOGY

Our customers, supported by expert Chefs and Food Technologists, have three laboratories available for training and product testing. Learning to exploit the full potential of the machine is the necessary step to achieve a new work standard for obtaining a product whose recipe has been perfectly balanced and tested in our laboratories.

## **PRODUCTION**

Every component of the machine is created and produced internally. Starting from their conception, they are designed, manufactured, tested and engineered. Following their validation they enter the internal production cycle. The company is provided with advanced equipment: Cutting lasers, Welding robots, 5-axis continuous lathes and 3D printers for AISI 316 for the production of increasingly multifunctional components, simplified and easy to clean. The quality control division monitors to make sure that the high standards are maintained throughout the production chain using computerized electronic measurement systems. At the end of assembly, wiring and software development, each machine enters the testing phase to check its operation, performance and efficiency together with all the devices installed. Obo is a jewel of Made in Italy and a perfect synthesis of a job that aims at customer satisfaction. Innovation, research and continuous technological adaptation are part of the company's character; it is an uninterrupted activity that gives us a great competitive advantage in the food processing sector.

## **SERVICE**

A multilingual assistance service that dialogues with the whole world to satisfy our customers' requests almost in real time.

Thanks to a specially developed software, we are able to connect directly to the machine to identify the source of the fault and operate on it remotely. In case of need, specialized technicians leave our headquarters for a careful and punctual on-site assistance service.

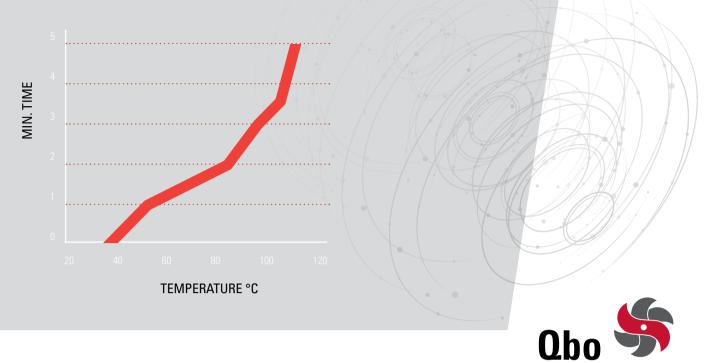

EVERYTHING IS CREATED IN THE BENTIVOGLIO'S HEADQUARTERS. DESIGN, RESEARCH, TECHNOLOGICAL INNOVATION, EXPERIMENTATION, PRODUCTION OF ALL COMPONENTS AND SPECIALIZED ASSISTANCE.

A COMPANY, COORDINATED BY A TEAM OF PROFESSIONALS, THAT BRINGS THE PRIDE OF MADE IN ITALY IN THE WORLD.

A concentration of quality, creativity, efficiency and technological innovation. Compact, simple to use and extremely fast. Every food processing process is safe and of superior quality. Roboqbo has made possible a new way of working by loading the concept of quality again. A single machine, many functions to cut, chop, mix, emulsify, steam pressurized and vacuum cook, cool, concentrate, homogenize, pulverize and knead.

# A SOUS-CHEF WITH A GREAT POTENTIAL

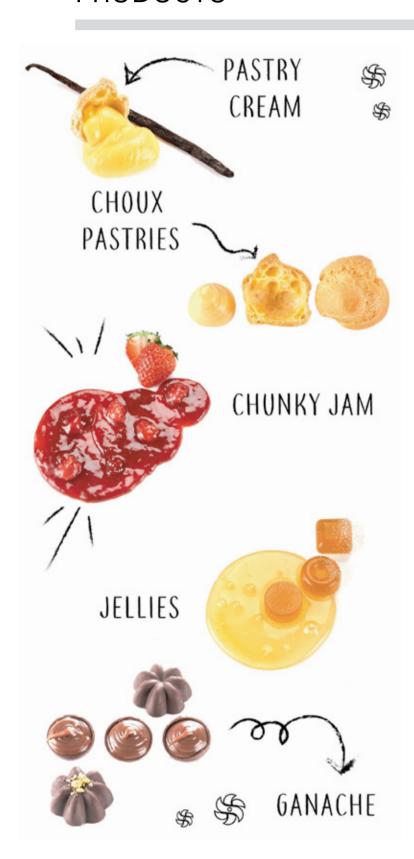

## INFO SHEETS:

 Indicative values based on Roboqbo recipes and correct machine installation.

infinite capacities

- The load expressed in kg refers to the total weight of the ingredients.
- The times indicated refer to the process and exclude the loading and unloading phases.
- The values can change depending on the capacity of the machine and the recipe.

## 1 / Emulsify

To make ganaches, mayonnaises, cold sauces and pates: perfect emulsions in their structure, stable over time, shiny and de-aerated thanks to constant temperature control.

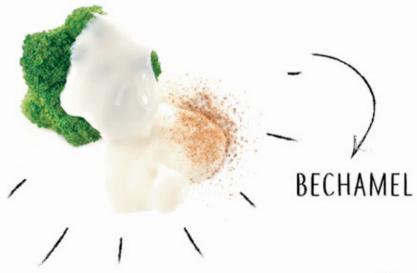

PEST0

## **Qbo Processes**

## 4 / Pasteurize

To make fruit juices, creams, bechamel and hot sauces. The patented cavity steam cooking system guarantees cooking speed, control and uniformity of temperature. On request, direct intake of steam into the container.

## PESTO PASTE <

## 2/Refine

To make almond, hazelnut and pistachio paste. The Qbo Vacuum System allows to slow down the dried fruit oxidation and to regulate the working speed. It keeps the product in perfect balance between fibre and oils. The process is carried out in controlled cold temperature to maintain the natural taste of the raw materials.

SPREADABLE

CHEESE

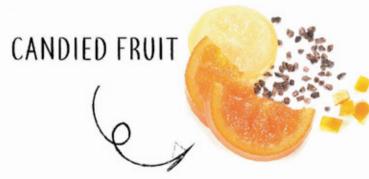

## 3 / Concentrate

To make jams, marmalades, tomato sauces, condensed milk.

The concentrations in vacuum preserve all the organoleptic characteristics and the nutritive principles of the ingredients. The Qbo system returns ultra-fast and customizable concentrations thanks to the possibility of evaporation below 100°.

To make marshmallows, meringues and mousses. Thanks to the Aeroqbo technology it is possible to standardize the intake of air for a result with extraordinary softness.

## 5 / Osmosis candying

To make candied fruit and mustards of excellent quality and in record time with the exclusive Robogbo technology.

## 6 / Fusion

To make spreadable and fondue cheeses. The vacuum system and the power of the blade, release a structurally superior, smooth and homogeneous fusion. Ultra-fast heating allows the processing cycle in half the time.

## \$

## 8 / Knead

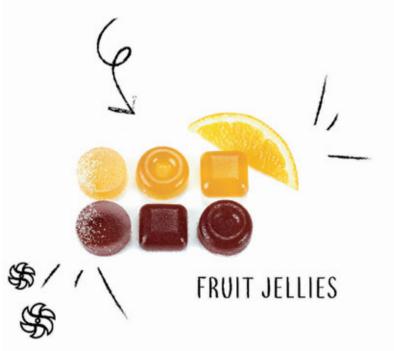

To make muffins, stuffed with meat, cheese and fish; choux pastry, shortcrust pastry. With Qbo it is possible to knead both cold and hot in a very short time for a homogeneous and smooth result.

## 10 / Evaporate

To make jellies and mirepoix.

With Qbo it is possible to cook with channelled evaporation outside the work environment, without environmental pollution, using a gentle heat that preserves original aromas, colours and fragrances.

## 9 / Cool

To make icings, creams and ganaches.
Rapid cooling increases product life by shortening storage times. Temperature reduction occurs in the same processing cycle.

# CHICKPEA CREAM 11 / Pressure cooking

To make meat sauce, pates, soups, risottos, meat dishes, humus and other legume creams. Thanks to pressure cooking in the absence of air, the flavour of the ingredients is enhanced, the product is not burned and the times are noticeably shorter.

A Qbo FOR EVERY PRODUCTION REQUIREMENT.
DIFFERENT SECTORS, ONE MACHINE. SEVERAL

PROCESSES, ONE CONSTANT: Qbo.

## TECHNOLOGY THAT REQUIRES KNOWLEDGE AND EXPERTISE

The over 40 years of activity in the food field spent with customers to test the products are the basis of the **Qbo** technological development.

A clientèle distributed in all sectors of transformation and the great dimensional diversity of the destination companies from the small farm to the high quality confectionery, from the production laboratory to the research and testing laboratory, from food multinationals to national and international franchising chains - has been the most demanding challenge and has given rise to a complete range of models able to satisfy every production requirement, in any sector, of any size, in every part of the world.

## Qbo 4.0 THE ACCESSORIES

## SIMPLE AT HAND

## **MICRO-SERRATED BLADE** makes Qbo a high-level cutter

ingredients.
For pushed refinements and homogenizations.

for cutting and chopping

#### **SMOOTH BLADE**

thanks to its strong cut it is used for perfect chopped meats, vegetables and fruit, without pressing.

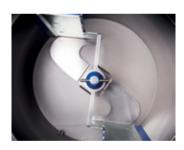

#### **MIXING TOOL**

To mix gently keeping the size unchanged, both cold and in cooking.

#### **AEROQBO**

is the special tool to incorporate air, modified atmosphere and CO2 in particular and delicate production processes. For soft and foamy aerated products.

#### **VERTICAL MIXING TOOL**

is the innovative tool for mixing in a uniform and delicate way, which can be used for cooking and cooling of products at a low stirring level in a short time.

#### **BASKET FOR CANDYING**

particularly suitable for candying delicate fruits such as chestnuts, strawberries and sliced citrus fruits. Thanks to the Roboqbo system it is possible to make perfect candying in less than 24 hours. The basket for candying can also be used for steam cooking.

#### BILIA

is the ball refining system for the production of hazelnut or other dried fruit spreads, praline and anhydrous creams. Particularly easy to use and very easy to clean, it allows to change taste in a few minutes without dragging the pollution of flavours from previous processes.

#### **DOUBLE COOLING**

manages two different cooling fluids to reach lower refrigeration temperatures or in shorter times. The second fluid is recovered and managed in a closed circuit without any loss.

#### **DIRECT STEAM**

is an optional device for heating by steam injection directly into the processing container and into the product. It can be used individually or together with the standard heating (indirect).

#### **FOOD STEAM**

is an additive system for steam filtration. It allows the elimination of all the particles potentially carried by the steam such as bacteria, metal molecules, minerals and others. Always recommended in the case of direct steam.

#### CIP

performs the washing by managing the appropriate detergents and the recirculation and rinsing phases, providing a working environment with the correct PH. Totally automated and integrated, it can be programmed by the operator according to the characteristics of the ingredients and the process used.

#### **WEIGHING SYSTEM**

allows weighing in the loading phases or to detect weight loss in concentrations. Integrated in the machine and in the software, it is used directly from the control panel.

It includes the tare reset function.

#### **ENHANCED MOTOR**

it allows to work at normal workload even with products that, due to their viscosity, require a reduction in the quantity that can be processed.

#### REFRACTOMETER

it allows to detect the Brix degree throughout the process determining its duration up to the right degree desired.

#### LIQUID FEEDER

allows the continuous introduction of fluid or liquid ingredients throughout the process. The device can also be purchased separately, perfect for emulsions such as mayonnaise and liquid concentrations with low fixed residues such as milk, broth and must.

#### **SAMPLES DRAWING**

it is an instrument integrated in the tank for the extraction of a small sample of product without having to stop the process in progress. It is possible to repeat the extraction several times during the same work cycle.

#### LITRE COUNTER

it is a management and control system for the quantity of water loaded in the tank that can be operated from the control panel.

Possibility of further software and hardware customizations according to the customers' production needs.

# Qbo factor QUALITY SERVICES

## **TRAINING**

START-UP AND TRAINING SERVICE

## **SERVICE**

TELEPHONE, ON-SITE AND REMOTE ASSISTANCE SERVICE WITH SPECIALIZED ROBOQBO TECHNICIANS. THE SOFTWARE DEVELOPED ALLOWS REMOTE CONNECTION TO ANYWHERE IN THE WORLD. MANUAL AND TECHNICAL DOCUMENTATION ON THE MACHINE

## **WARRANTY**

**EXTENSIBLE UP TO 3 YEARS** 

... we continue the research and accept all the challenges!
